

Sitos®

SITOS® Learning portal

SITOS® Learning portal

Our new SITOS® learning portal offers a combination between the features of a classical learning management system and a web portal.

The SITOS® learning portal forms the basis of online learning in the inter- or Intranet. This platform offers a uniform entrance of courses and lessons for the learner. Beside e-Commerce functions, which permit the purchase of courses, there are methodical and didactical functions and services, which are necessary for net based learning.

Technical requirements

- Independent of data base and server platforms
- The special hardware requirement depends on the respective employment of the SITOS® learning portal. Recommended is a Pentium II system with min 256MB RAM (with Linux operating system)

How SITOS® learning portal works

SITOS® learning portal is a web-based platform for the administration of learning contents, learners, coaches and the existing extensive collaboration and communication possibilities such a forum, newsletter, chat, e-Votes, black board, e-Messaging, news and group calendar ranges.

Individual Configuration

By simple changing of design templates and graphics is any corporate design possible.

Clear prompting

The menu options are structured clear and the features are available at any time for the user. And you can win an impression of the contents by free demo lessons.

Course administration with registration

After online registration or the alternative user mechanism by central place which is LDAP supported, the learners are able to access to the contents and the communication features. The learners are assigned to virtual learning groups with different collaboration and communication features, as well as some different courses.

Personal learning range with learning success control

In the learning range you can find the booked and de-energised contents and you are able to learn comfortably and the learning data can be logged and evaluated. So it is possible to get some online certificates and also a development of intelligent training profiles.

Communication and co-operation

The special strength of the SITOS® learning portal is the data communication area. Within forums, News type character, electronic notices, internal e-Mail function, chat, votings, visiting card function, new range and group calendars. The users are able to communicate and get informations. The group calendar gives information about the presence of telephone tutors e.g. in the chatroom and serves in principle for the information for synchronous learning units between learner and phone-tutor.

Data base and server independently

The SITOS® learning portal is data base and server independently. No matter whether you use Windows NT/2000, Solaris, Linux or AIX. Our learning portal is developed with PHP and from the well-known Web servers Apache or IIS (Windows systems), these platforms is far common supported.

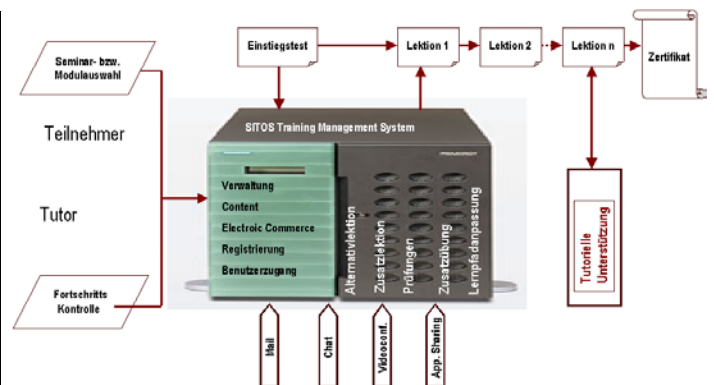

The data base Oracle, ms SQL or also MYSQL can be used alternatively, whereby also different data base systems can be used.

Reasons to use SITOS®

The SITOS® learning portal supports the training course to the responsible person with comfortable evaluation possibilities of the learning progress. The data includes the actual learning time, which facilitates the optimisation of the expirations of learning substantially.

A tutorial support help the learners with the solution of problems, to compile motivated additionally teaching subjects and hold the learning on the most current conditions.

Extensive Collaboration - and communication possibilities increase the acceptance of the learning platform.

The learning group concept

The users can be administered comfortably in different learning and communication groups, which support some different training course necessities.

Your advantages

- extensive administration possibilities
- easy conversion possibilities with complex training projects
- individual training paths
- training on the job and on demant
- clear evaluations of the learning progress
- reduced absence times
- comprehensible progress control
- learning... when, what, where ever you want
